

As amateur radio operator W7DJM I am EXTREMELY concerned about the lack of attention being paid to rf interference the BPL is causing and will cause. I do not simply operate amateur radio, I also expect to be able to LISTEN to shortwave broadcasts and transmissions. The "rf noise floor" is ALREADY polluted, and if you people (at FCC) were truly doing your job, this would not be the case.

An aside, just about ANY modern appliance, including computer displays, TV's, Video recorders, cellphone CHARGERS, lamp dimmers, and of course the infuriating touch lamp. Add this to just plain "power line noise." This all adds up. BPL problems will make these seem like a drop in the bucket. It is time for you folks to ENFORCE part 15 as it applies to HARMFUL INTERFERENCE. This not only INCLUDES BPL, it should be FOCUSED on BPL.

What I am reading from statements by Powell and others do not convey this to me.

Sincerely, Delar Messmore
